

Illustration 1.4 - Early warning saves lives

Better prepared, lives saved.

When we understand the weather and act early, we can protect people and save lives.

Around the world, scientists track storms, floods, heatwaves and droughts using satellites, radars and computers.

Early warnings give communities time to prepare—to move to safer places, protect homes, stock up on supplies and look after each other.

BETTER INFORMATION. EARLY WARNINGS. STRONGER COMMUNITIES.

These simple steps turn science into safety—and save thousands of lives every year.
